DI

DI

- The machine is composed of quartz sand filter, activated carbon filter, high pressure pump, RO components, UV sterilizer, pressure sensor, liquid level sensor, conductivity meter, flow meter, stainless steel valve and pipe fittings
- RO & MB combination : the most advanced ultrapure water manufacturing process
- The control system is fully automatic, and the quality of the output water is stable
- Ultra low pressure reverse osmosis module, low energy consumption, high water production
- Fully enclosed integrated design, small floor area, exquisite and generous appearance
