SM-60

## SM-60

- The appearance adopts streamlined design, beautiful and generous
- Put the nozzle into the cleaning room from the top of the equipment for automatic cleaning. The cleaning method is ultrasonic cleaning + pulse booster rinsing + pulse booster air drying
- Clean and dry 60 nozzles simultaneously. Realize high efficiency and energy saving
- The whole process can be observed through the inspection window, which is convenient for maintenance and operation
- 304 stainless steel body, anti-rust, anti-corrosion, strong and stable
- Humanized design, can realize one-key start and stop through external button
- Using HMI, touch screen + PLC distributed control, stable and reliable performance
- Easy operation, Chinese/English interface
- With misoperation alarm and emergency stop system, overload protection and leakage protection system
- Use environmental protection and pollution-free industrial DI water
- Centralized collection of wastes, convenient maintenance
