SM-7500

SM-7500

- Using WIN7 system, touch screen control the entire cleaning process to be completed automatically, LAN interface
- Integrate cleaning, rinsing, wind cutting and drying functions
- The spray chamber adopts nano surface treatment, no liquid droplets remain on the inner wall of the chamber, reducing liquid loss
- Use imported PPH pipes as liquid pipelines. Corrosion resistance, easy maintenance
- Cleaning, rough rinsing and fine rinsing are all equipped with real time circulating filtration system, independent pump and liquid circuit design, the spray liquid is directly returned to the cleaning tank through the mechanical mechanism during cleaning. Improve the utilization rate of liquid, and the liquid will not be mixed
- Safety door anti slide device, high safety factor. The machine running event records can be saved
- DI water integrated recovery, equipped with plasma, activated carbon, resin RO filtration, can achieve long-term zero discharge
- SUS304 stainless steel body, beautiful and durable; large cleaning batch, can save a lot of labor
