SM-8400N

SM-8400N

- Suitable for surface cleaning of all kinds of workpieces, such as wave soldering fixtures, reflow soldering condensers, machine parts, etc.
- One-button operation, complete the entire cleaning process automatically, without manual intervention
- It integrates cleaning, rinsing, wind cutting and drying functions. The times of adding & draining liquid, cleaning and rinsing can be set through the HMI
- After cleaning, the surface of the fixture is dry and clean, and it can be directly used in the subsequent process, the effect is greatly improved compared with manual cleaning
- Adjustable spray pressure, 720° omni-directional spray, cleaning no dead angle
- Both cleaning and rinsing are equipped with a real-time circulating filtration system, which greatly improves the utilization efficiency of liquid
- Large cleaning batches can save labor
- Low energy consumption, low operating noise, no pollution
- Used with high-efficiency water-based cleaning agent, low liquid consumption and low operating cost
