SM-8800 PCBA

## SM-8800 PCBA

- Suitable for In-line drying of the cleaned PCBA to remove water droplets and moisture residues to meet the needs of the next process
- Powerful wind cutting, completely remove water stains on the product surface
- Painted body, beautiful, eye catching, stainless steel design of the inner chamber, corrosion and high temperature resistance
- The unique zoned flexible heating control system reduces the starting power and the voltage drop of the grid, minimize the power consumption of the equipment
- High-efficiency heat exchange system, greatly increasing the circulating heat flow, and heating up quickly
- Modular design of heating zone, with lighting installed, making repair and maintenance extremely easy
- High-strength stainless steel guide rail design, small thermal deformation, ensuring accuracy
- Touch screen + PLC control, convenient and easy to use
